FASTENER SET FOR:

BROMPTON 2-SPD/I-SPD REAR HUB

The thread on these nuts (normally plated with a black finish) is not the same as for other rear axles, but similar enough to permit them to be erroneously fitted (just) to a Sturmey 3-spd axle. But the thread engagement would be tight, and damage could be caused to the axle: **so these fastenings must only be used on Brompton 2-spd/I-spd rear axles.**
